Networking iCARE

Windows XP or later is recommended. "Hard-wiring" is preferred over wireless networking, as a wireless network is not as secure. A reputable router (D-Link, LinkSys, etc.) is needed to connect the computers to your network.

O.H.I.P. File Submission

A 56k dial-up modem is required to connect to, upload and download the various OHIP files. Floppy disk drive submissions are phasing out, and therefore iCARE does not support this option. (High-speed internet submissions coming soon).

Printing Within iCARE

Printing the various iCARE reports, appointment schedules, documents, etc. requires a reliable printer. Bryware recommends a DYMO 450 Labeller for printing file, name, and address labels as well as barcodes.

Data Backup

500MB hard drive minimum. Available USB port for USB drive backups. An internet connection is required for off-site backups to the BryWare server. CD-RW or DVD-RW may also be used for backups.

MINIMUM TO RUN iCARE

- 1.0 GHz or higher computer
- Windows Operating System (Win XP or later recommended)
- 512MB RAM or higher
- 500MB hard drive space
- 3 USB ports
- .NET Framework 3.5 or later
- MS Access database engine
- Windows 7 is required for speech support in iCHAT.

BRYWARE SUPPORT

An internet connection is required for access to the www.Bryware.ca website and/or to access and download iCARE's Help Documentation and User Guides. iCARE Remote Assistance also requires an internet connection.
